PROFESSIONAL SUMMARY

Full-Stack .NET & AI Systems Developer with production experience building end-to-end web systems using C#, ASP.NET Core, Entity Framework Core, REST APIs, React, TypeScript/JavaScript, and PostgreSQL/SQL Server. Experienced in Clean Architecture, authentication and RBAC (JWT, ASP.NET Identity), real-time communication with SignalR, transactional email/notification workflows, and CI/CD with GitHub Actions. Currently focused on integrating AI into product workflows—including AI-assisted fashion recommendation and scheduled daily outfit generation—while keeping AI workloads resilient through multi-layer validation, deterministic fallback paths, mocked testing, and source-level observability. Experienced in contract-first OpenAPI/Swagger design, unit/integration testing, and peer-reviewed Git/GitHub engineering workflows.

EXPERIENCE

Software Developer — Egyptian Air Force Oct 2024 – Aug 2026

- Owned full-stack operational features end-to-end from RESTful API architecture in ASP.NET Core through Entity Framework Core data access, SQL Server query optimization, and JavaScript frontend implementation.
- Architected stateless JWT authentication, authorization, and role-based access control (RBAC); integrated third-party services and designed maintainable, fault-tolerant API flows.
- Diagnosed production application and database bottlenecks, optimizing SQL Server execution plans and data access patterns while collaborating with QA and stakeholders through rigorous testing and UAT.
- Standardized Git/GitHub version control and GitHub Actions CI/CD workflows; accelerated delivery using AI coding assistants governed by strict code review, automated testing, and critical validation prior to integration.

SELECTED PROJECTS

AI Fashion Platform / Fashion MVP — AI-enabled fashion product platform | **Next.js, React, TypeScript, Python, PostgreSQL/Supabase, Groq, GitHub Actions**

- Architected a full-stack and AI integration workflow, evolving the platform beyond a conventional recommendation UI toward an automated, AI-driven fashion styling workflow.
- Decoupled the AI daily-outfit generation pipeline into an out-of-band scheduled Python job rather than placing slow model calls directly in the Next.js request path, improving resilience and page responsiveness.
- Engineered daily outfit generation around verified user wardrobe item IDs—storing AI reasoning/styling data, confidence scores, and source metadata—with deterministic fallback behavior when AI generation fails or references stale items.
- Implemented validation and test-oriented safeguards around AI responses, including item-pool validation, reasoning validation, confidence bounds, mocked model/database testing, retry/backoff behavior, and graceful fallback.
- Automated daily generation with GitHub Actions and separated scheduled AI execution from the normal CI workflow; added source-level observability to compare AI-generated, fallback, and engine-generated outfit performance.
- Delivered the end-to-end 5-stage fashion workflow (wardrobe data → item extraction/processing → recommendation/generation → daily outfit persistence → UI retrieval and explanation) with a modular architecture built for future AI services.

Social Wardrobe — ARC E-Commerce & Social Fashion Platform | **C#, ASP.NET Core, Entity Framework Core, PostgreSQL, React, Vite, SignalR, MailKit, JWT, Swagger**

- Architected and extended a full-stack fashion/e-commerce platform with a separate ASP.NET Core backend and React frontend, using layered Core/Application/Infrastructure Clean Architecture and dependency injection.
- Delivered 12+ REST API modules covering authentication, users, products, carts, orders, vendor workflows, creator profiles, outfits, follows, wishlists, outfit boards, and user wardrobe/selfie features.
- Developed the social wardrobe experience around public outfits and creator profiles, including likes, saves, comments, follows, follower/following counts, mutual followers, style tags, social links, and creator outfit discovery.
- Implemented real-time vendor/order communication with ASP.NET Core SignalR, authenticated hub connections, and vendor-specific groups for targeted operational events.
- Integrated transactional email and notification workflows; implemented a frontend notification center with unread state, filtering, mark-all-read behavior, browser notifications, and event-specific sounds for orders, payments, stock, and reviews.
- Built protected React routes, reusable UI components, Axios API integration, responsive application layouts, vendor tooling, and client-side hooks for cart, outfit building, and vendor-order workflows.

TECHNICAL SKILLS

Backend	.NET Core, C#, ASP.NET Core, RESTful APIs, Entity Framework Core, JWT, ASP.NET Identity, RBAC, SignalR
Frontend	React, Next.js, TypeScript, JavaScript/ES6+, Vite, React Hooks, Context, Tailwind CSS, Bootstrap
Databases	PostgreSQL, SQL Server, Supabase, query optimization, execution plan tuning, relational data modeling
AI / Automation	AI workflow integration, Groq API, Python automation, AI response validation, fallback design, scheduled jobs
Testing / API Tools	Postman, Swagger/OpenAPI, unit/integration testing, mocked model/DB testing, API debugging & validation
Version Control / DevOps	Git, GitHub, GitHub Actions, CI/CD pipelines, Docker, Azure Cloud Services, Vercel, Cloudflare R2
Development Tools	Visual Studio, VS Code, Claude Code, GitHub Copilot, Codex
Engineering	OOP, SOLID principles, design patterns, Clean Architecture, dependency injection, system design

EDUCATION & CERTIFICATION

Bachelor of Telecommunications and Networking Engineering — Luxor University, Very Good | 2019–2024
Graduation Project: LiFi Communication System — Excellent | **Certification:** Machine Learning Certificate — National Telecommunication Institute (NTI)

LANGUAGES

Arabic (Native) | English (Fluent, C1) | German (A2)
